

# AS5304

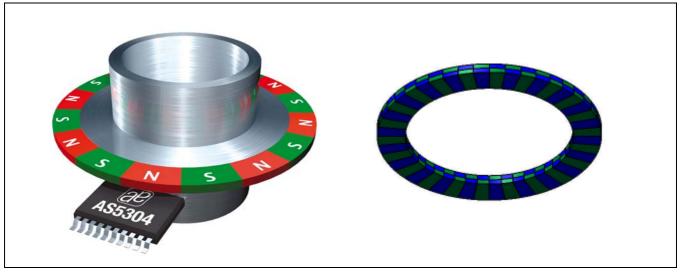

#### Magnetic Multipole Ring, MR20-44 Pole Length 2.0 mm, 44 Poles

#### Magnet Specification

#### **1** General Description

This specification defines the dimensional and magnetic properties of a multipole magnetic ring for use with the AS5304 magnetic encoder for off-axis rotary applications.

Note:

The MR20-44 magnet contains only the magnetic ring (see picture on the right), the metal carrier is shown for illustration purposes only

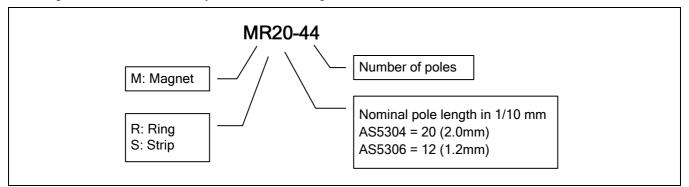

# 2 Multipole Ring Magnets for the AS5304

Figure 2 shows the proper placement of a multipole ring over the AS5304. The centerline of the magnetic ring (median Hall sensor scan path) is located over the Hall array (see Figure 3).

The magnetic ring is designed such that the pole length Ip matches the required length at the scan path (typically the center) of the ring. The IC is oriented in perpendicular with respect to the rotation center.

The correct measurement radius can be calculated by the number of poles of the magnet ring and the specified pole length:

These figures can be determined by the code of the magnet:

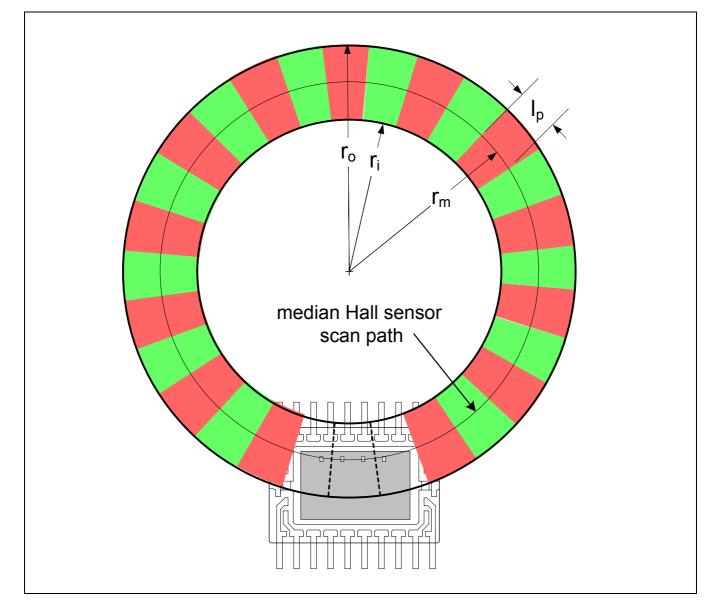

austriamicrosystems

The correct measurement radius for the MR20-44 magnet ring is therefore:

$$rm = \frac{pole\_length(mm)*number\_of\_poles}{2*\pi}$$
$$rm = \frac{2.0*44}{2*\pi} = 14.00mm$$

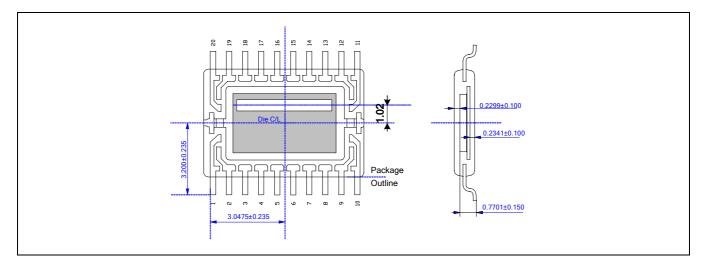

#### 3 Locating the Hall Sensor Array

The measurement radius should coincide with the Hall sensor array on the chip. The location of the Hall sensors can be seen in Figure 3. The Hall sensor array is located 1.02mm above the horizontal centerline of the TSSOP-20 package, or

3.20mm + 1.02mm = 4.22mm above the edge of pins #1....10 (top view, pin#1 at bottom left).

## 4 Dimensional Specification

Magnet Order # AS5000-MR20-44 on austriamicrosystems web shop

Parameter	Symbol	Min	Тур	Мах	Unit	Note
Magnet material						Plastic bonded Strontium Ferrite SrFe. Supplier-internal material grade = BMNP-1612
Remanence	Br	280		300	mT	
Pole length	l <sub>p</sub>		2.0		mm	Suited for AS5304
Number of poles			44			
Inner ring radius	r <sub>i</sub>	11.975	12	12.025	mm	
Resolution		3520			steps/rev	
	Res	11.78			bit	With AS5304 @ 160x interpolation
		880			ppr	
Measurement radius	r <sub>m</sub>		14.00		mm	Pole length* number of poles / $2\pi$
Outer ring radius	r <sub>o</sub>	15.975	16	16.025	mm	
Strip thickness	d	1.5	1.5	1.6	mm	
Magnetic amplitude	A <sub>mag</sub>	52	76	89	mT	Measured at magnet surface
Amplitude variation				25	mT	
Temperature range	$T_{amb}$		Tbd		°C	
Magnetic temperature drift	T <sub>dmag</sub>		Tbd		%/K	

## 5 Mechanical Drawing

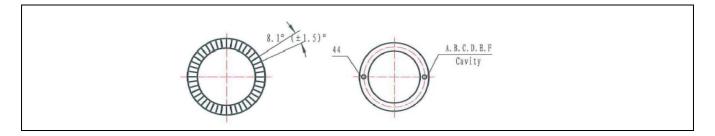

## 6 Marking

The magnet ring has two marks at the backside:

One mark shows the number of poles (44) the other mark shows a single digit letter (A...F), which is of no relevance.

Figure 4 Markings at the backside of the magnet

## 7 Mounting the Magnet Ring

As mentioned in chapter 5, the magnet ring has two markings, which represent the **backside** of the ring. The front side should be facing the AS5304 IC with a gap of <lp/2 = <1.0mm.

The magnet ring may be mounted directly on magnetic or non-magnetic surfaces. When magnetic surfaces are used, the ring may be mounted on top of the surface, but not immersed in a cavity, as this may weaken the magnetic field of the magnet. When mounting the magnet on a non-magnetic surface, either method is acceptable.

Depending on the carrier material, there are several adhesives available to glue the ring to the surface. For general ruggedness and vibration demands, the use of two-component-adhesive (binder + hardener) has proven to be successful in most cases.

For more rigid demands, magnet suppliers offer customized solutions where the magnet material is directly overmolded on the carrier, e.g. a shaft, bushing, plate, etc..

Please contact your magnet supplier for more information. A list of recommended suppliers is available for download on the austriamicrosystems website.

## 8 Magnet Supplier Information
